

BEAN TREPADORA

A DYNAMIC CLIMBING BEAN WITH SUPERIOR YIELD AND POD QUALITY

- Strong, adaptable plant with a large upright frame
- Very high yield potential
- Pods are straight and uniform with good gel retention
- Extended pod set ideal for fresh market production
- Slow seed development and excellent gel retention

Type

Climbing Bean.
Category: Fine.

Maturity

60 - 70 days to first harvest, depending on weather conditions.

Plant Characteristics

Vigorous. Excellent leaf cover. Good pod protection. Indeterminate growth habit.

Plant Frame: Large. 300 - 400 cm.

Plant Habit: Indeterminate.

Variety Characteristics

Pod Characteristics:

Pod set: Extended.

Pod length: 14 - 16cm.

6.1 – 7.0mm: 5%

7.1 – 8.0mm: 90%

>8mm: 5%

Features & Benefits

Market: Fresh Market

High Resistance: Bean Common Mosaic Virus (BCMV), and Rust (Ua).

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
